PROCEDURE GUIDE | Ingenium

Adding a Rider to an In-Force Policy

Steps for adding a term or waiver rider to an in-force universal life policy, with eligibility checks and the premium impact.

Purpose

Policyowners can add certain riders after issue. This guide describes the eligibility checks, the underwriting requirement and the steps to add a rider to an in-force universal life policy.

Eligibility

Rider	Eligibility	Underwriting
Child term rider	Policy in force, insured under age 55	Not required for existing children
Waiver of premium	Insured under age 60, no premium arrears	Required
Accidental death benefit	Insured under age 65	Not required

Procedure

1. Confirm the policy is in force and has no premium arrears.
2. Review the change history list for pending or future-dated transactions.
3. Check the eligibility table above. If underwriting is required, send the application and wait for approval.
4. Open Add Coverage in Ingenium and select the rider.
5. Enter the rider amount and the effective date. The effective date is normally the next monthly anniversary.
6. Review the new premium and the updated cost of insurance, then confirm the change.
7. Send the updated policy page to the policyowner.

Adding more children to an existing child rider

If a child rider already exists, add the child to the existing rider instead of creating a new rider. Enter the child's name, date of birth and sex. The rider amount does not change.

Notes

- A rider cannot be added while a claim is open on the policy.
- Adding a rider changes the premium. Send the revised premium to the policyowner.
